```
public class RandomContactFactory {

    public static List<Contact> generateRandomContacts(Integer numcnt, string lastname){
        List<Contact> contacts = new List<Contact>();
        for(Integer i=0;i<numcnt;i++){
            Contact cnt = new Contact (FirstName = 'Test '+i, LastName = lastname);
            contacts.add(cnt);
        }
        return contacts;

    }
}
```
